

# Datadog APM instrumentation

Implementation services to  
instrument applications with  
Datadog APM.

Datadog Application Performance Monitoring (APM) provides companies insights into application metrics, facilitating increased visibility and understanding of distributed business transactions across many different systems.

As a Datadog Gold Partner, creator of the Datadog Mule® Integration and Datadog Mule® Integration for APM IO Connect Services has extensive deep expertise building and implementing enterprise-grade solutions.

Up to 10 applications can be instrumented in two weeks with this offer.

## Price

Fixed price for 10 of applications contact-us for more information.

## Our experts will:

- Advise and establish the best practices for tracing and correlation strategy for your applications and APIs.
- Install the Datadog agents in up to three environments: Development, QA, and Production.
- Manually instrument the applications with APM to create traces in Datadog when needed.
- Inject metadata to traces and spans to help in the creation of reports and dashboards.
- Correlate logs with APM traces.
- Create monitors for the most critical services.
